Nuclear Sciences & Applications

Technical Cooperation

“Atoms for Peace and Development”

IAEA in Numbers

Founded in 1957: **64 Years** of international service

168 Member States

~2500 Professional and support staff

Regular Budget (2016) ~ €360M

Extra-budgetary (voluntary) ~ €50M

Technical Cooperation Fund contributions (voluntary) **~ €90M** in 2016

12 international laboratories (Vienna, Seibersdorf and Monaco) and research centres

1+ million documents, technical reports, standards, conference proceedings, journals and books in the IAEA Library

IAEA Fast Reactor Technology Development Team

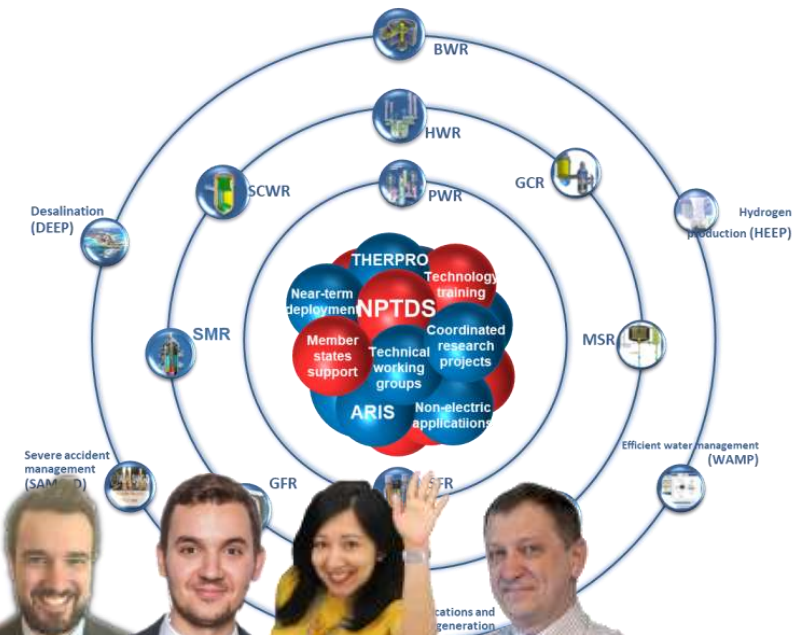

Nuclear Power Technology
Development Section NPTDS

*“Atoms for Peace
and Development”*

**Fast Reactor Technology
Development Team**

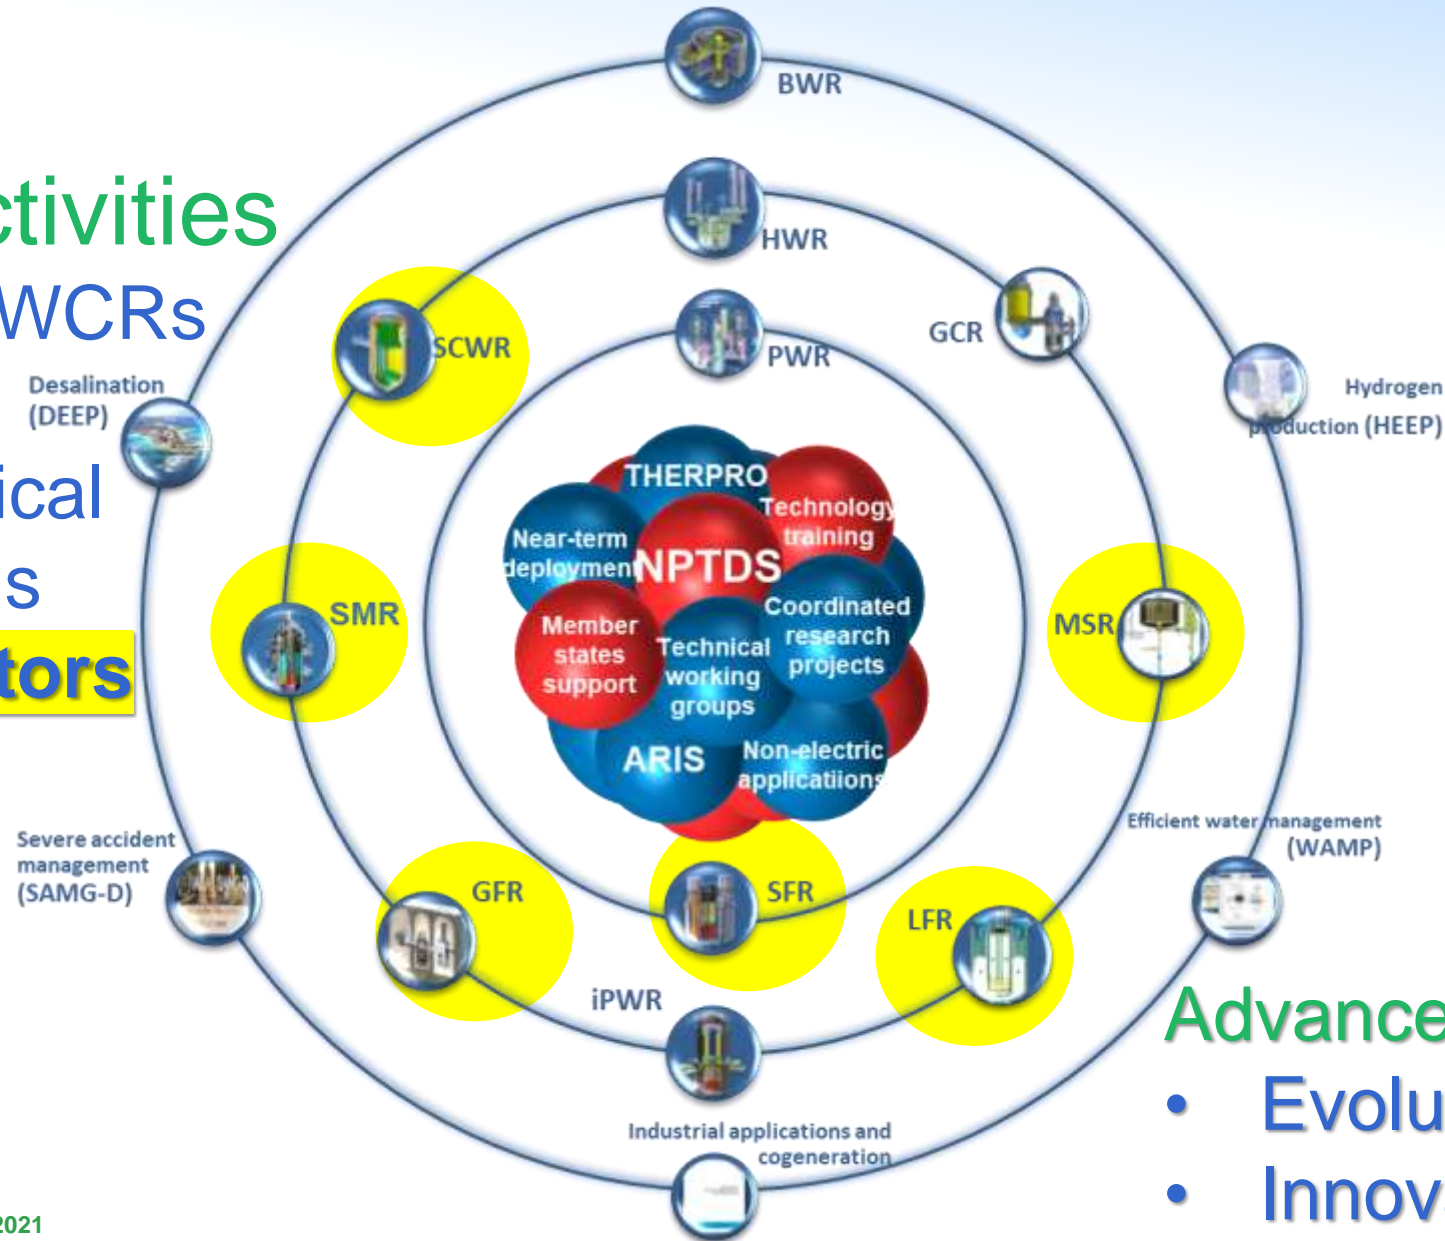

Nuclear Power Technology Development Section

NPTDS:

Tasks & Activities

- Advanced WCRs
- SMRs
- Non-Electrical Applications
- **Fast Reactors**

Advanced Reactors:

- Evolutionary (Gen-III+)
- Innovative (Gen-IV)

IAEA Coordinated Research Projects

The IAEA encourages and assists research on and development and practical use of atomic energy and its applications for peaceful purposes throughout the world. It brings together research institutions from its developing and developed Member States to collaborate on research projects of common interest, so-called **Coordinated Research Projects (CRPs)**.

CRP completed in last decade

BN-600 MOX Core Benchmark

PHENIX – EOL Tests

MONJU – Na Natural Convection

Analytical and Experimental
Benchmark Analysis of **ADS**

EBR-II Shutdown Heat
Removal Tests

CRPs on Fast Reactors Technology

On-going CRPs

PSFR Source Term –
Radioactive Release Under
Severe Accident Conditions

Neutronics Benchmark of **CEFR**
Start-Up Tests (29 participants)

Benchmark Analysis of **FFTF** Loss
of Flow Without Scram Test
(25 participants)

NAPRO – Na Properties and
Safe Operations of Exp. Facilities
Ended in Sept 2018
2 TECDOCs in Publishing

New Proposals

Total Instantaneous Blockage
of SFR Fuel Assembly

Simulation of **CLEAR-S**
Loss-of-Flow Experiment

Benchmark Analysis of
STELLA-2 LOHS/LOF Tests

Natural Circulation in LBE
Sub/Assembly: **NACIE** Tests

CRP on Benchmark Analysis of *EBR-II* Shutdown Heat Removal Tests (2012-2016)

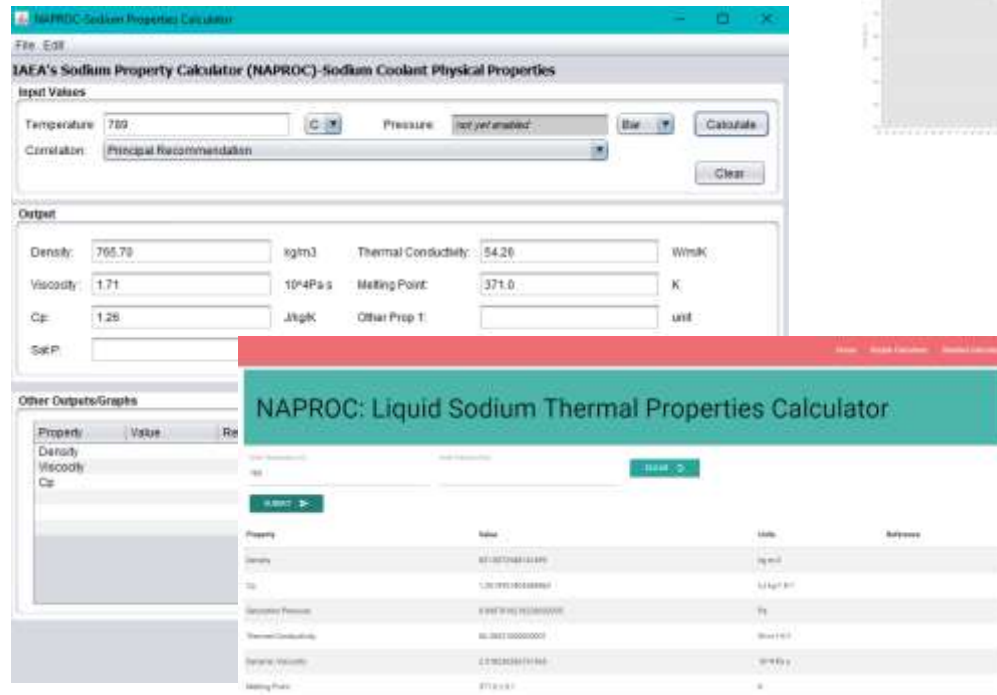

Driver (47)	Control Rods (8)
High-flow Driver (23)	Safety Rods (2)
Half-worth Driver (13)	SST Dummy (6)
Outer Blanket (330)	Experiments (5)
SST Reflector (201)	Instrumented (2)

- Coupled Neutronics and Thermalhydraulic Transient Simulations
- SHRT-17 (Protected): Loss of normal and emergency pumping
- SHRT-45 (Unprotected): Loss of normal flow, scram disabled, station blackout
- 20 Organizations from 12 Countries jointly produced simulations predicting most plant parameters with acceptable accuracy

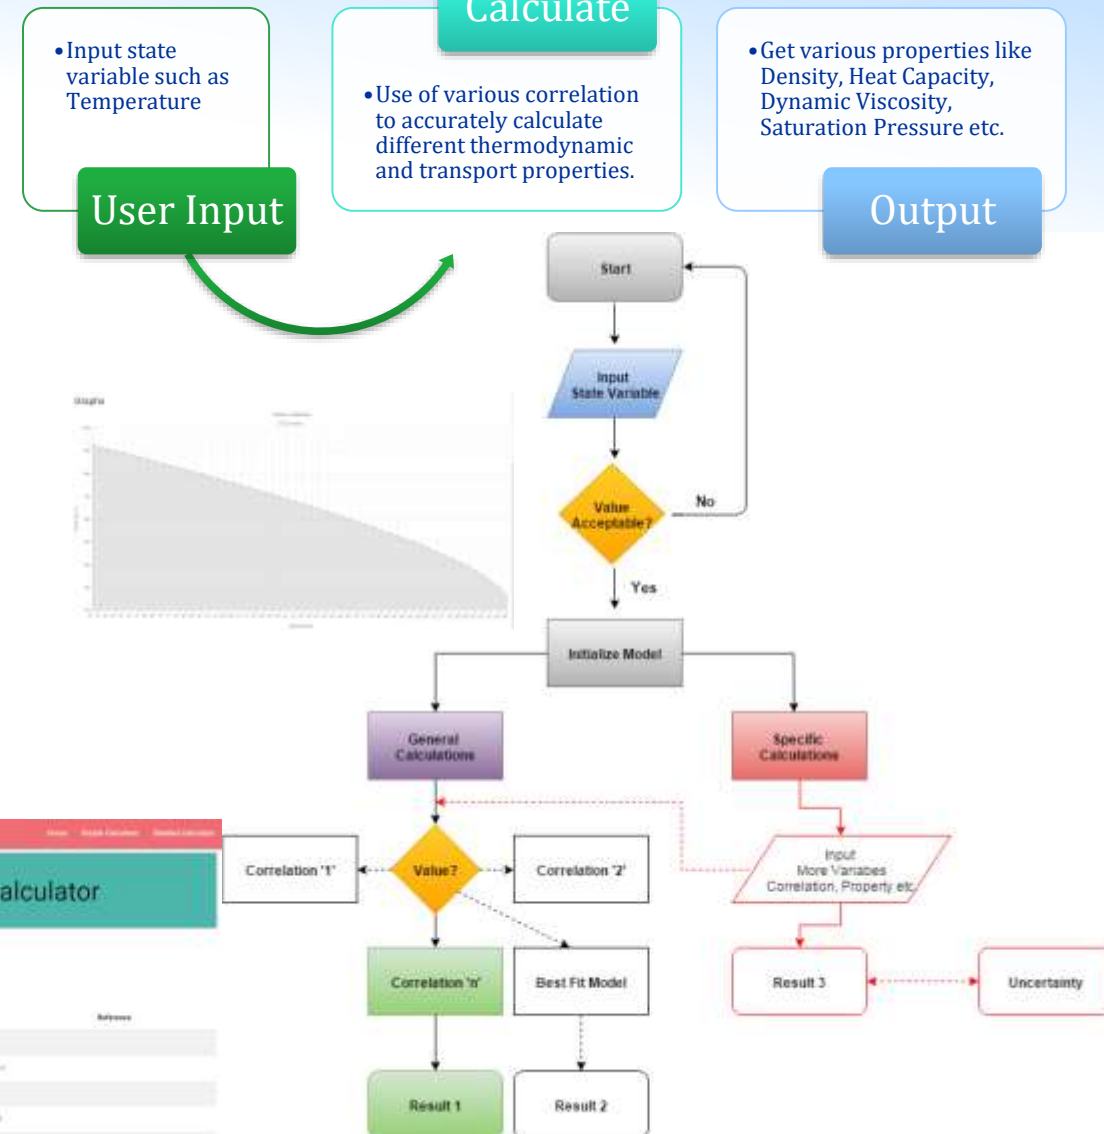

NAPROC^β: The Sodium Properties Calculator

- Easy to use software to get the thermophysical of liquid sodium.
- Input the required state variables and get all desired properties.
- Beta version under development.
- Modelling based on the use of various correlations.

NAPROC^β flow model

CRP on Radioactive Release from Prototype SFR under Severe Accident Conditions (2016- 2020)

CDA development and propagation in pool type SFR

Initiation
(neutronics),
and **Transition**
(fuel relocation)
Phases
Core Melt/Bubble is
formed

I. Expansion Phase

Core bubble expands in sub-cooled sodium

*Incipient melting
and early relocation*

*Extended relocation
and core compaction*

*Rapid fuel vapor
bubble expansion*

Reference design for the safety analysis:
500 MWe pool type PFBR

Very complicated multi-physics phenomenon
Can be a Standard Benchmark for Verification of
Safety Analysis Codes and Models

II. Quasi-static Phase

*Release of sodium to the
Reactor Containment Building
(RCB)*

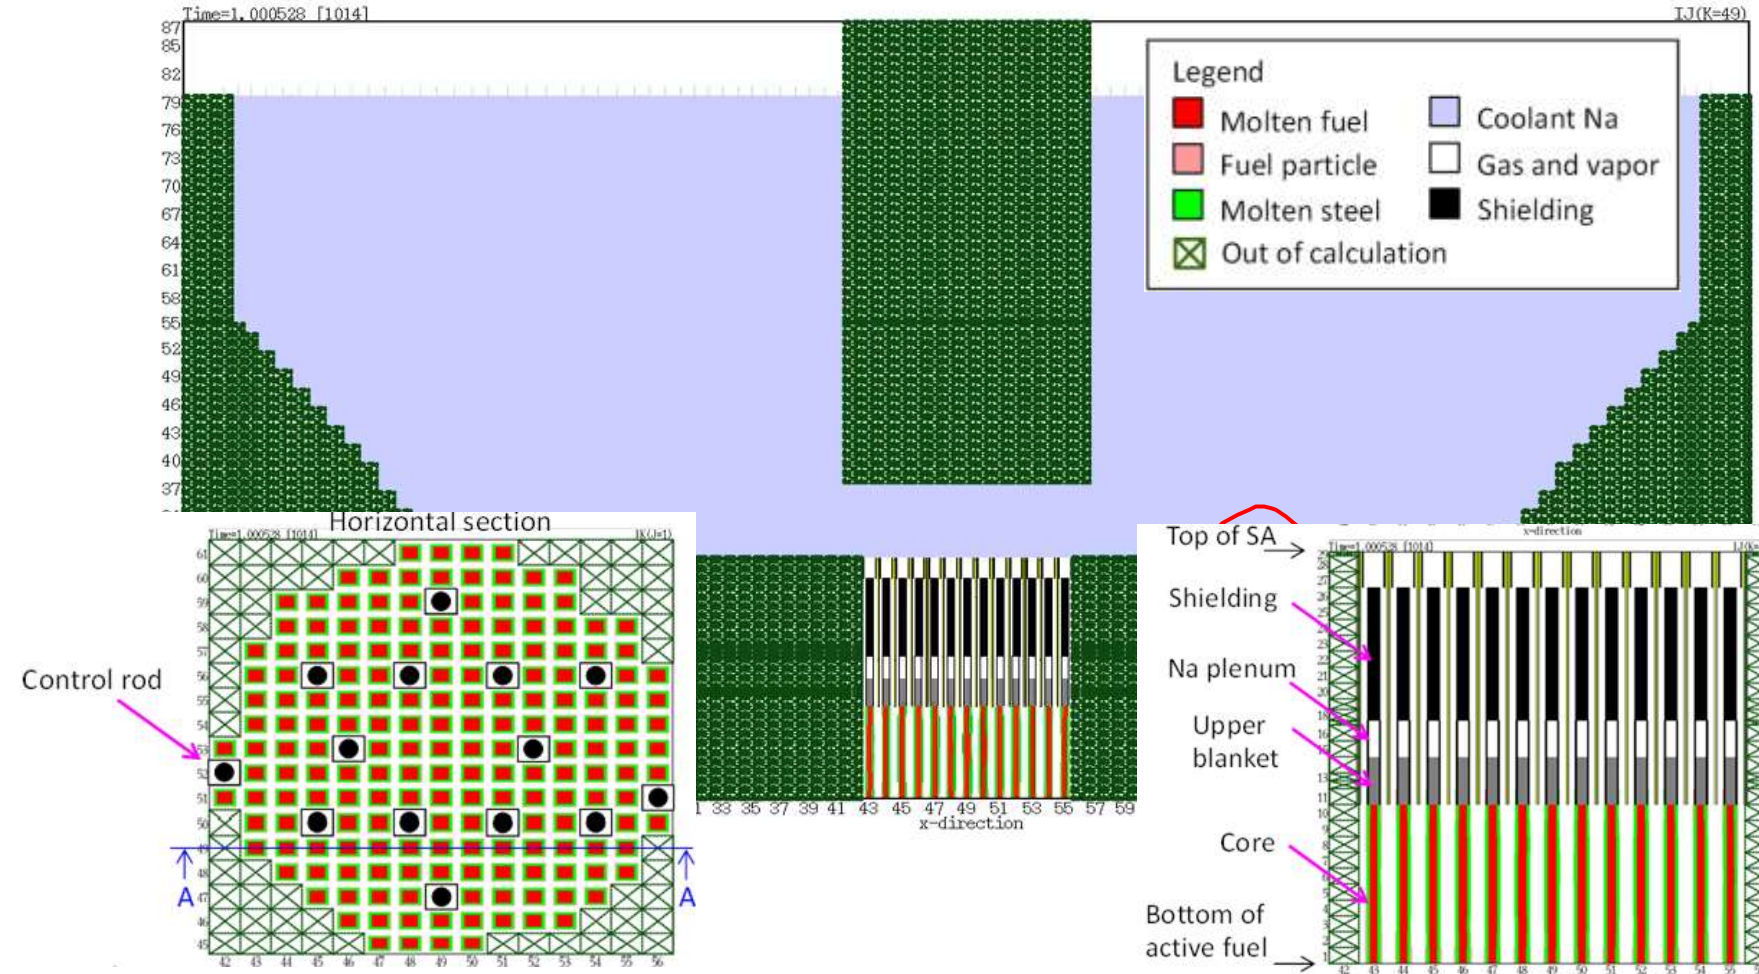

III. Containment Source Term

- Evaluation of multi-component aerosol evolution is required
- Two typical sodium fire accidents:
 - sodium pool fire accident
 - sodium spray fire accident

CRP on Radioactive Release from Prototype SFR under Severe Accident Conditions (2016- 2020): Expansion Phase

[Click to play SIMMER-IV Video](#)
(provided by JAEA)

WP-1. Sodium Bubble Expansion Phase

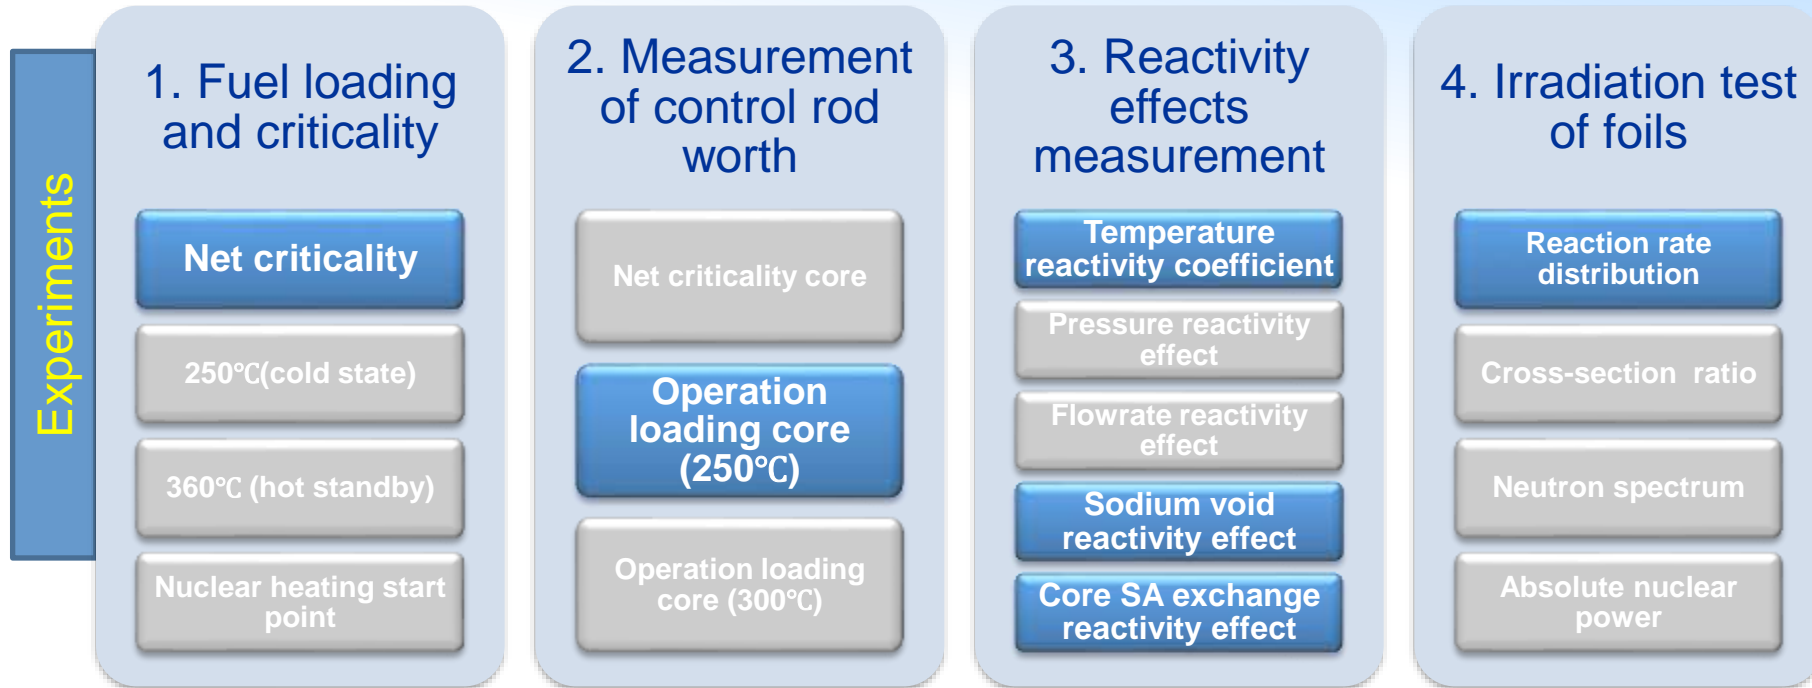

New CRP: Neutronics Benchmark of CEFR Start-Up Tests

- China Experimental Fast Reactor
 - Sodium-cooled fast reactor with nominal power of 65MW(th), 20MW(e)
 - Reached the first criticality in 2010
 - Generated electricity at 40% full power and was connected firstly to the grid in July 2011
 - Generated electricity at 100% power in December 2015 and operated for more than 40 effective full power days

1st, Kick-Off RCM: June 2018, Vienna

CEFR Start-Up: Tests and Simulations

Planned duration: 2018 – 2022

Kick-off RCM: 11-14 June 2018 (27 Participants from 17 MSs)

2nd RCM: 28 October – 1 November, Beijing

CRP: Neutronics Benchmark of CEFR Start-Up Tests

2nd RCM: Comparing 'Blind' Simulations vs. Experiment

WP1	Net criticality
WP2	Control Rod Worth
WP3	Temperature reactivity coefficient
WP4	Sodium void reactivity effect
WP5	Core S/A exchange reactivity effect
WP6	Irradiation test of foils

CRP: Benchmark Analysis of FFTF Loss of Flow Without Scram Test

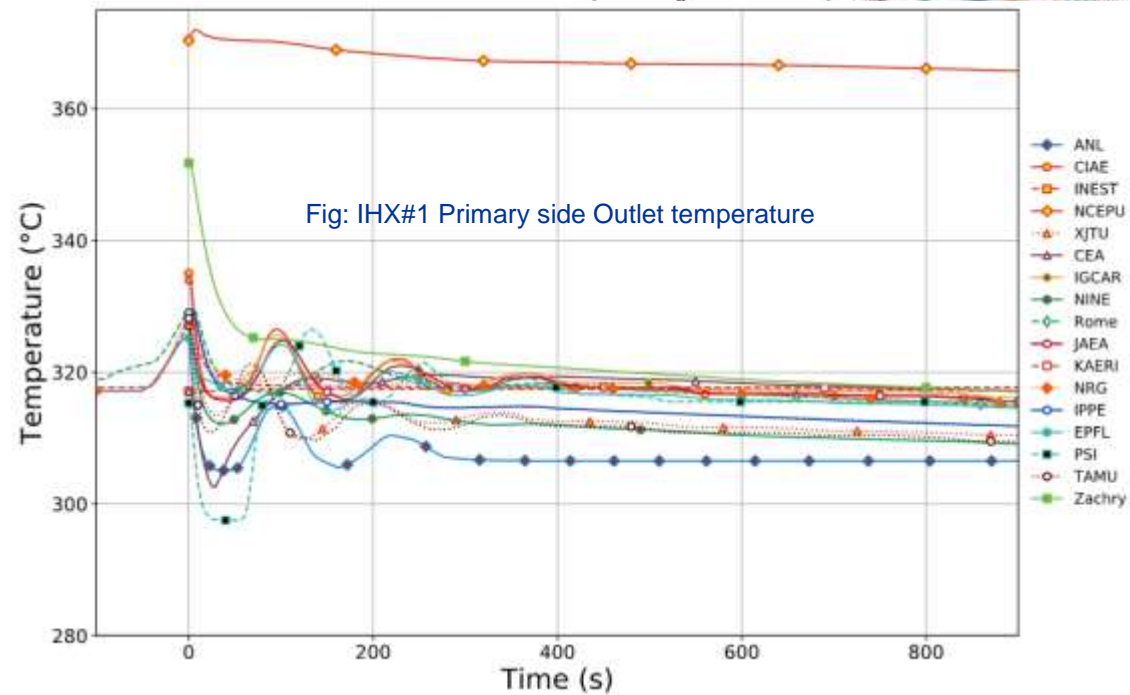

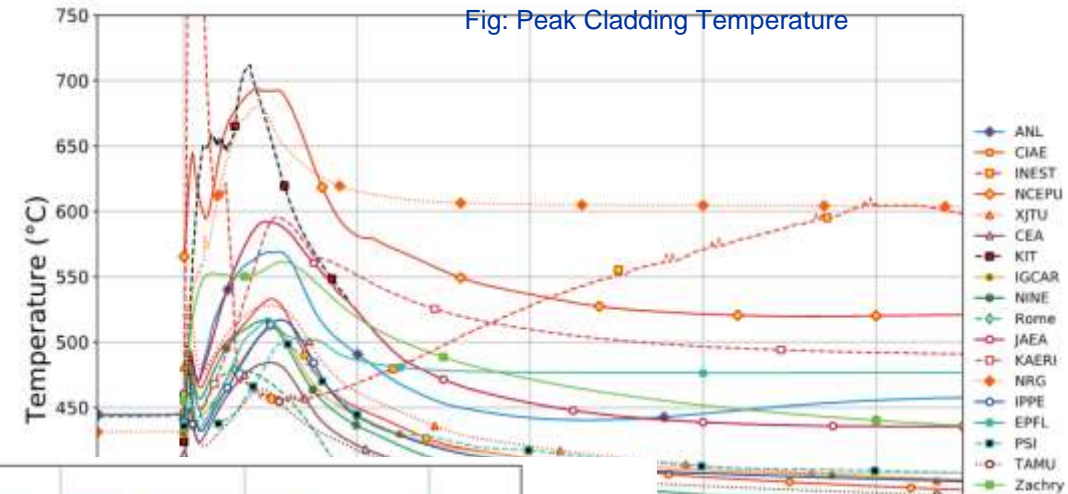

- FFTF Reactor:
 - 400 MW(th) sodium cooled fast test reactor
 - Mixed UO₂-PuO₂ (MOX) fuel
 - Loop type plant, axial and radial reflectors
 - Prototypic size
 - ~1m³ core volume
 - ~91 cm high, ~120 cm diameter
 - Series of Passive Safety Tests
 - Demonstrated passive safety of SFRs
 - Demonstrated efficacy of negative reactivity insertion safety devices (GEMs)

CRP: Benchmark Analysis of FFTF Loss of Flow Without Scram Test

2nd Virtual Meeting: Update & End of Blind phase

- Completed the blind phase, no more updates to the blind phase results now
- Refined phase calculations started
- 2nd RCM planned for Feb 2021 – Online or postponed to Nov 2021
- Refined phase results to be completed by June 2021
- FR21 special session with 5 papers on benchmark (May 2021)
- First draft TECDOC in 2022

Fast Reactors Safety: Joint GIF-IAEA Workshops on Safety of LMFRs

A decade of cooperation

1st : June 2010

2nd : Dec 2011

3rd : Feb. 2013

4th : June 2014

5th : June 2015

6th GIF-IAEA Workshop on Safety of SFR

November 2016

7th Joint GIF-IAEA Workshop on **LMFR** Safety

March 2018

- Final Review of GIF Report on Safety Design Guidelines on Safety Approach & Design Conditions for GEN-IV SFRs

8th GIF-IAEA Workshop on LMFR Safety

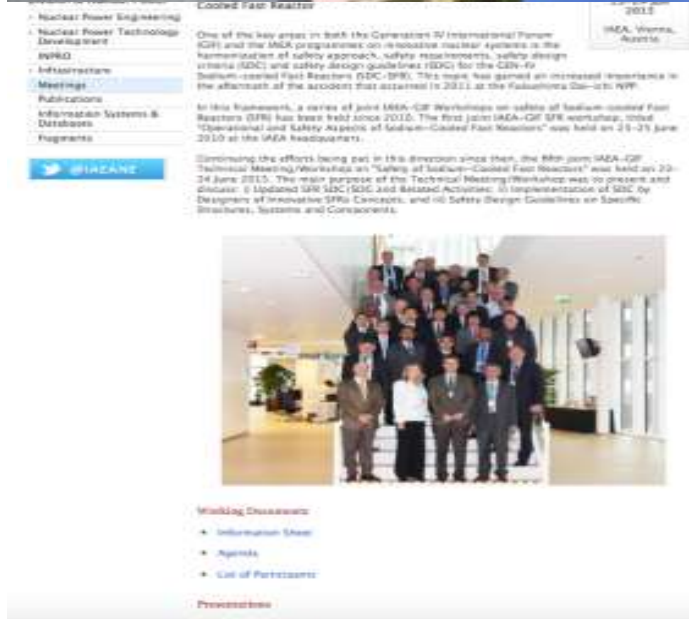

20-22 March 2019

- Discussion of GIF Report on “Safety Design Guidelines on Structures, Systems and Components for Gen-IV SFRs”

9th GIF-IAEA Workshop on LMFR Safety

18-20 March 2020 >> postponed>> March 2021

- Review of GIF Report on “Safety Design Guidelines on Structures, Systems and Components for Gen-IV SFRs”

Online Catalogue on LMFNS Experimental Facilities

Experimental Facilities in support of Development and Deployment of Liquid Metal cooled Fast Neutron Systems

Includes an overview as well as detailed information on **190** experimental facilities under design, construction or operation 19 institutions from 14 IAEA Member States contributed

Freely Available at iaea.org:
Search for “IAEA LMFNS”

Updated in August 2019:

- Added **38** New Facilities
- Updated Profiles for **41** Facilities

Catalogue of Facilities in Support of Liquid Metal-cooled Fast Neutron Systems (LMFNS Catalogue)

This LMFNS catalogue is a living database, which is, in its current form, presents an electronic Nuclear Energy Series publication (in progress) "Experimental Facilities in Support of Liquid Metal-cooled Fast Neutron Systems. A Compendium".

LMFNS Compendium. Summary of the IAEA publication

To overview the potential capabilities of 150 experimental facilities in 14 IAEA Member States, click on the below buttons:

Overview of SFR

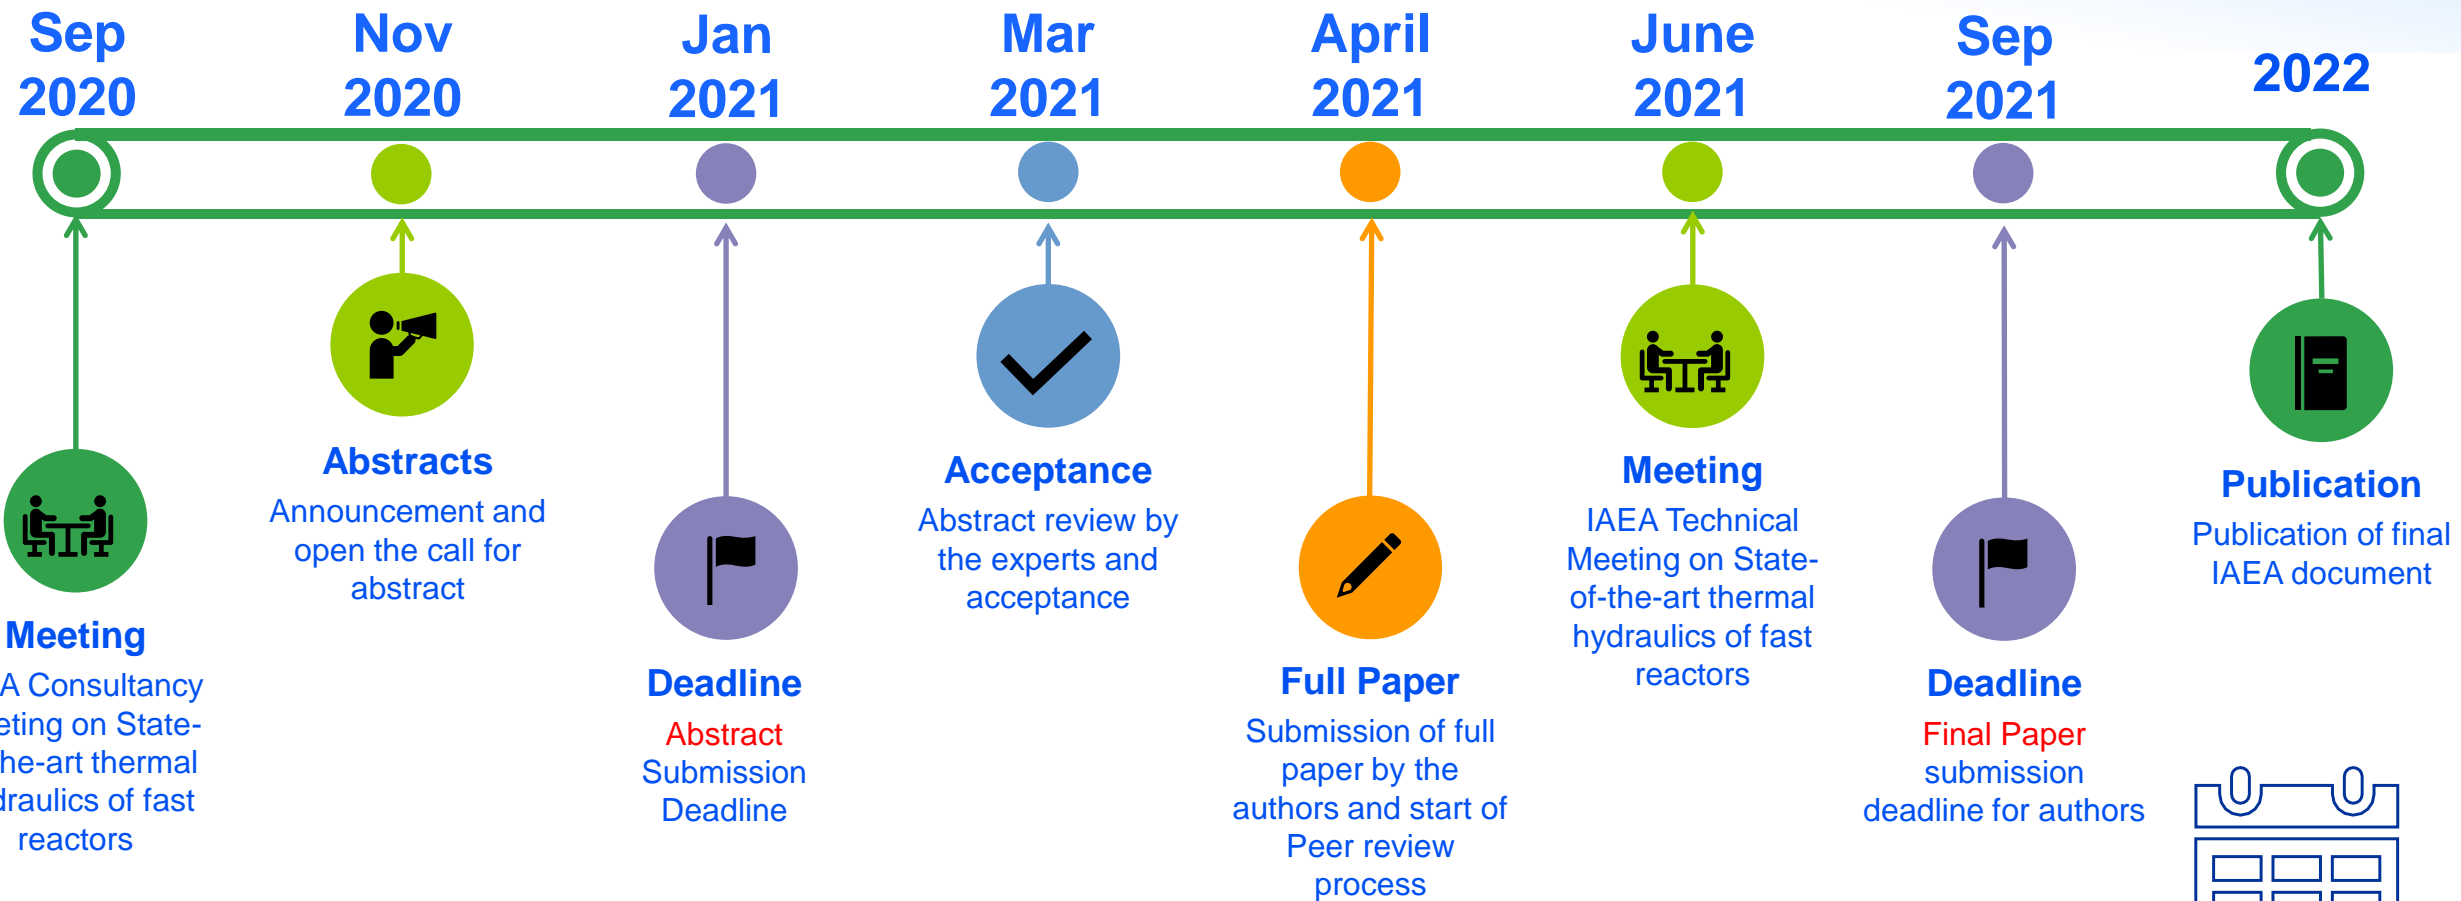

Overview of LFR

For detailed information on these facilities 1) click on the below button "LMFNS Facilities Database" (also on top of this page), 2) select the Coolant technology - SFR, LFR or both in the search box, 3) use other search and filtering tools as appropriate, 4) click on the Facility Profile you are interested in.

LMFNS Facilities Database

New Technical Meeting on State-of-the-art Thermal Hydraulics of Fast Reactors

Joint ICTP-IAEA Workshops on Innovative Nuclear Energy Systems

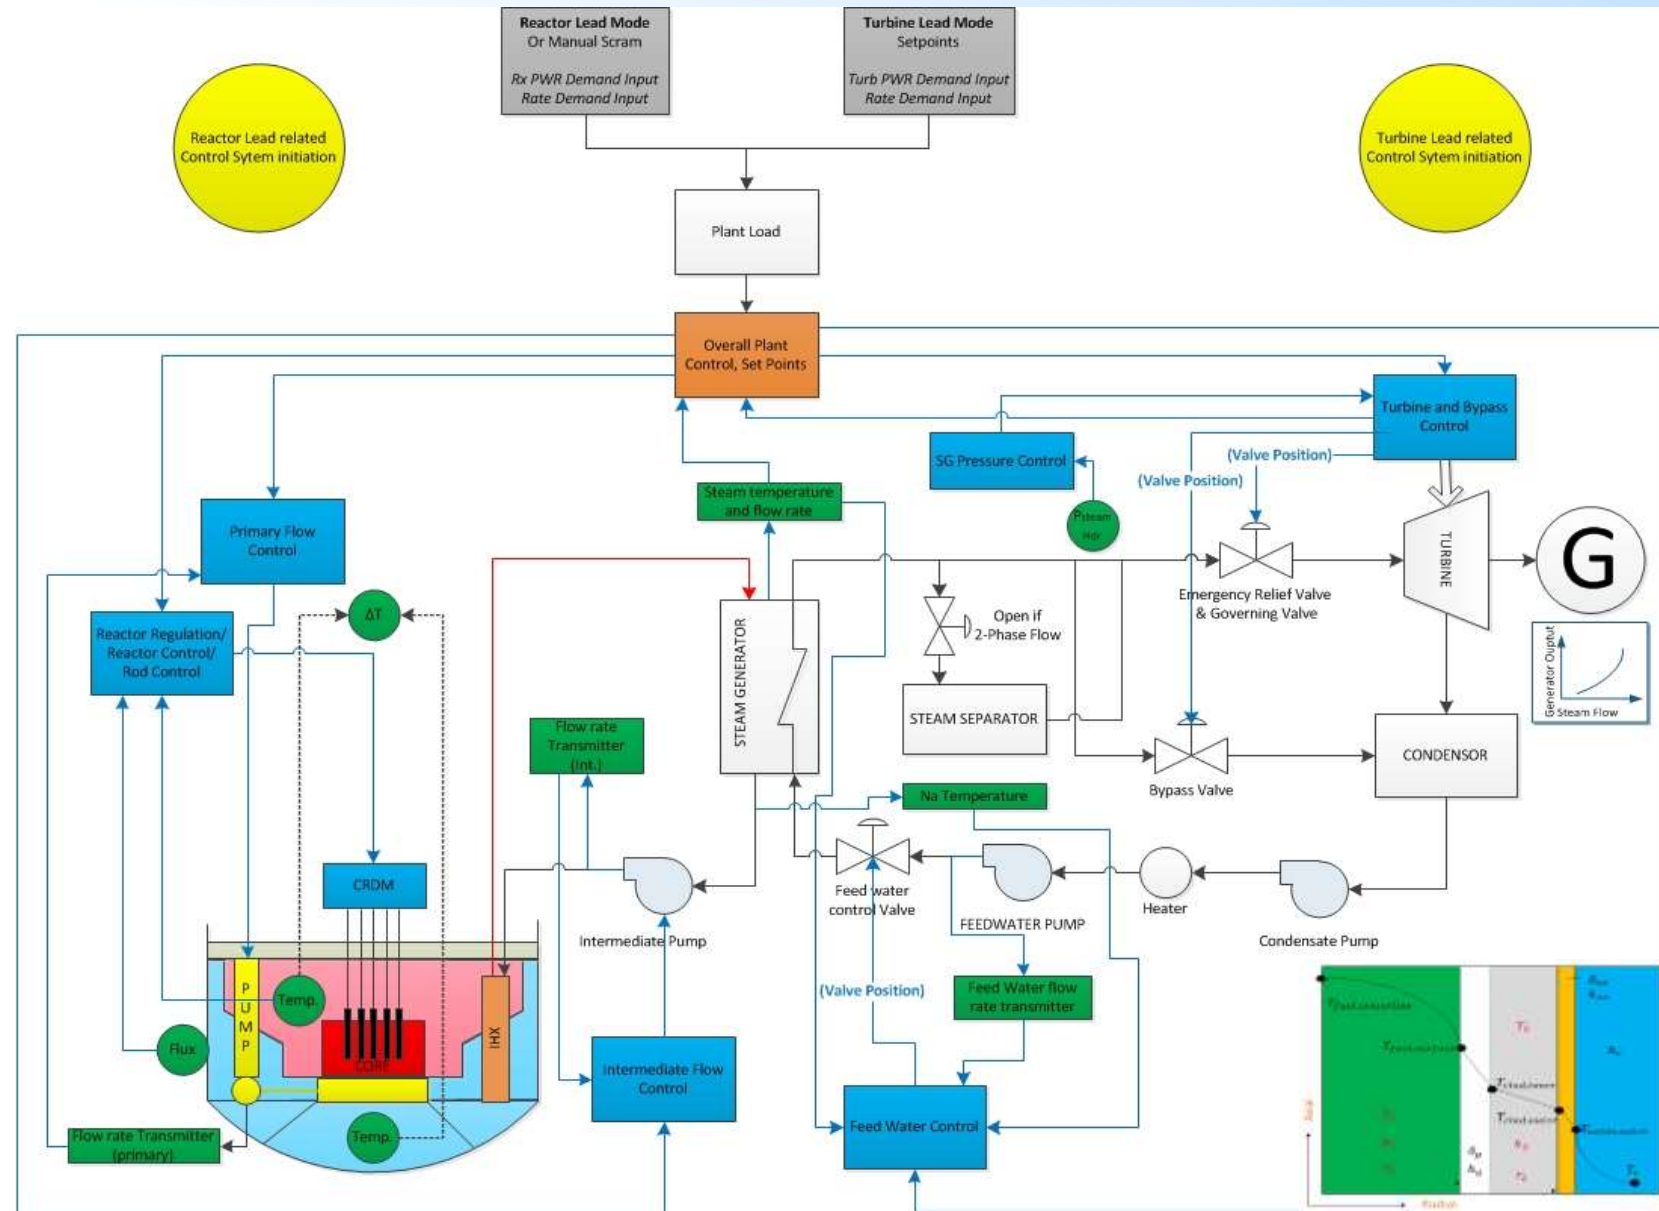

- In **2016** and in August **2018** Trieste, Italy
- Contributed by NPTDS, INPRO, GIF, and other external experts
- **Next Workshop: July 2020 >> 2021/22??**

SFR Simulator for Educational Purposes

- Pool type sodium cooled fast reactor simulator for education and training
- 2021: delivered to the IAEA in testing now
- end of 2021: distribution to the Member States

NES: Passive Shutdown Systems for Fast Neutron Reactors

[Click to access:](https://www.iaea.org/publications/13386/passive-shutdown-systems-for-fast-neutron-reactors)

<https://www.iaea.org/publications/13386/passive-shutdown-systems-for-fast-neutron-reactors>

- Lithium expansion modules
- Lithium injection modules
- Curie point latches
- Thermostatic switches
- Lyophobic capillary porous systems
- Flow levitated absorbers
- Cartesian divers
- Levitated absorber particles
- Enhanced thermal elongation of control rod drivelines
- Gas expansion modules
- Autonomous reactivity controls
- Travelling wave reactor thermostats
- Thermo siphon based passive shutdown systems
- Static absorber feedback equipment

Lithium expansion module concept

A levitated absorber system for self-actuated shutdown system

Passive shutdown system with flow levitated rods for BN-800

FR09 >> FR13 >> FR17 >> FR21 Conferences

IAEA International Conferences on
Fast Reactors and Related Fuel Cycles

FR21>>FR22^{AEA}

Beijing
April 2022

FR22: 530 Abstracts accepted

Working at the IAEA

In Fast Reactors Team:

- One Year Internship
- Six Months Temporary Assignment (P2 Professional)
